Q. Create the standard calculator application in android:

Adroidmanifest

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
  xmlns:tools="http://schemas.android.com/tools">

  <application
     android:allowBackup="true"
     android:dataExtractionRules="@xml/data_extraction_rules"
     android:fullBackupContent="@xml/backup_rules"
     android:icon="@mipmap/ic_launcher"
     android:label="@string/app_name"
     android:roundIcon="@mipmap/ic_launcher_round"
     android:supportsRtl="true"
     android:theme="@style/Theme.Calculator">
     <activity
        android:name=".MainActivity"
        android:exported="true">
        <intent-filter>
           <action android:name="android.intent.action.MAIN" />

           <category android:name="android.intent.category.LAUNCHER" />
        </intent-filter>
     </activity>
  </application>

</manifest>
```

Colors

```
<?xml version="1.0" encoding="utf-8"?>
<resources>
  <color name="black">#FF000000</color>
  <color name="white">#FFFFFFFF</color>
  <color name="teal_primary">#009688</color>
  <color name="teal_dark">#00796B</color>
  <color name="button_gray">#E0E0E0</color>
</resources>
```

Themes

```
<resources xmlns:tools="http://schemas.android.com/tools">
  <style name="Base.Theme.Calculator" parent="Theme.AppCompat.Light.DarkActionBar">
     <item name="colorPrimary">@color/teal_primary</item>
     <item name="colorPrimaryDark">@color/teal_dark</item>
     <item name="colorAccent">@color/teal_primary</item>
```

```
    <item name="titleTextColor">@color/white</item>
  </style>

  <style name="Theme.Calculator" parent="Base.Theme.Calculator" />

  <style name="CalcBtn">
    <item name="android:layout_width">0dp</item>
    <item name="android:layout_height">0dp</item>
    <item name="android:layout_columnWeight">1</item>
    <item name="android:layout_rowWeight">1</item>
    <item name="android:textSize">20sp</item>
    <item name="android:textStyle">bold</item>
    <item name="android:layout_margin">6dp</item>
    <item name="android:background">@color/button_gray</item>
    <item name="android:textColor">@color/black</item>
  </style>
</resources>
```

Activity main

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
  android:layout_width="match_parent"
  android:layout_height="match_parent"
  android:orientation="vertical"
  android:padding="10dp"
  android:background="#FFFFFF">

  <TextView
    android:id="@+id/tvResult"
    android:layout_width="match_parent"
    android:layout_height="250dp"
    android:background="#EEEEEE"
    android:gravity="bottom|end"
    android:padding="50dp"
    android:text="0"

                .setCancelable(false) // Prevent closing by clicking outside
                .setPositiveButton("Yes", (dialog, which) -> {
                    // User clicked Yes, so close the activity
                    finish();
                })
                .setNegativeButton("No", (dialog, which) -> {
                    // User clicked No, so just close the dialog
                    dialog.dismiss();
                })
                .show();
    }
}
```

Press the Back Button to see the Alert
Activate Windows
Go to Settings to activate Windo

1:55
Exit Application
Are you sure you want to exit?
No
Yes
Activate Windows
Go to Settings to activate Windo

Q Create an android application to pass the data from one activity to another activity in the same application using intent.

Activity_main.xml

<?xml version="1.0" encoding="utf-8"?>

```
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
  android:layout_width="match_parent"
  android:layout_height="match_parent"
  android:orientation="vertical"
  android:gravity="center"
  android:padding="20dp">

  <EditText
     android:id="@+id/etInput"
     android:layout_width="match_parent"
     android:layout_height="wrap_content"
     android:hint="Type a message here"
     android:textSize="18sp" />

  <Button
     android:id="@+id/btnSend"
     android:layout_width="wrap_content"
     android:layout_height="wrap_content"
     android:text="Send to Second Activity"
     android:layout_marginTop="20dp" />

</LinearLayout>
```

Activity_second.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"

  protected void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.activity_second);

    // 1. Bind View (Matches activity_second.xml)
    tvResult = findViewById(R.id.tvResult);

    // 2. Get the Intent that started this activity
    Intent intent = getIntent();

    // 3. Extract the string using the same Key "USER_MESSAGE"
    if (intent != null) {
      String receivedText = intent.getStringExtra("USER_MESSAGE");

      // Set the text to the TextView
      tvResult.setText(receivedText);
    }
  }
}
```

AndroidMAnifest addf this line

```
<activity android:name=".SecondActivity" />
```

Q. Create a user interface with a TextView, Button, and ImageView. When the button is clicked, the image should be changed dynamically.

Prerequisite: Add Images

Before running this code, you **must** copy two images into your `res/drawable` folder:

1. Name the first image `image_one.jpg` (or .png)
2. Name the second image `image_two.jpg` (or .png)

File: `res/layout/activity_main.xml`

```xml
<?xml version="1.0" encoding="utf-8"?>

<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"

   android:layout_width="match_parent"

   android:layout_height="match_parent"

   android:orientation="vertical"

   android:gravity="center"

   android:padding="20dp">

   <TextView

       android:id="@+id/tvStatus"

       android:layout_width="wrap_content"

       android:layout_height="wrap_content"

       android:text="Current Image: One"

       android:textSize="22sp"

       android:textStyle="bold"

       android:layout_marginBottom="20dp"/>

   <ImageView

       android:id="@+id/ivDisplay"

       android:layout_width="250dp"

       android:layout_height="250dp"

       android:src="@drawable/image_one"

       android:scaleType="centerCrop"
```

```
        android:layout_marginBottom="30dp"/>

    <Button

        android:id="@+id/btnChange"

        android:layout_width="wrap_content"

        android:layout_height="wrap_content"

        android:text="Change Image"

        android:padding="15dp"/>

</LinearLayout>
```

MainActivity.java

```
package com.example.imagechanger; // TODO: Check your package name

import android.os.Bundle;

import android.view.View;

import android.widget.Button;

import android.widget.ImageView;

import android.widget.TextView;

import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

    // Declare View variables

    private TextView tvStatus;

    private ImageView ivDisplay;
```

```java
private Button btnChange;

// Flag to track which image is currently showing
private boolean isImageOne = true;

@Override
protected void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.activity_main);

    // 1. Initialize Views
    tvStatus = findViewById(R.id.tvStatus);
    ivDisplay = findViewById(R.id.ivDisplay);
    btnChange = findViewById(R.id.btnChange);

    // 2. Set Button Click Listener
    btnChange.setOnClickListener(new View.OnClickListener() {
        @Override
        public void onClick(View v) {
            if (isImageOne) {
                // Switch to second image
                ivDisplay.setImageResource(R.drawable.image_two);
                tvStatus.setText("Current Image: Two");
                isImageOne = false; // Update flag
            } else {
                // Switch back to first image
```

```
                    ivDisplay.setImageResource(R.drawable.image_one);

                    tvStatus.setText("Current Image: One");

                    isImageOne = true; // Update flag

                }

            }

        });

    }

}
```

Q. Create the background service android application to play the ringtone/music.

1:19
Start Service
Stop Service

1:21
Start Service
Stop Service
Music Service Stopped

res/layout/activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>

<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"

   android:layout_width="match_parent"

   android:layout_height="match_parent"

   android:orientation="vertical"

   android:gravity="center"
```

```
    android:padding="20dp">

    <Button
        android:id="@+id/btnStart"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Start Service"
        android:padding="20dp" />

    <Button
        android:id="@+id/btnStop"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Stop Service"
        android:padding="20dp"
        android:layout_marginTop="20dp"
        android:backgroundTint="@android:color/holo_red_dark" />

</LinearLayout>
```

MusicService.java

```

        });
    }
}
```

Android manifest

```
<service android:name=".MusicService" />
```

Q. Create an android application which automatically notify the user when Aeroplane mode is turned on or off using a broadcast receiver.

MainActivity.java

```
package com.example.airplanemodeapp; // TODO: Check your package name

import android.content.Intent;

import android.content.IntentFilter;

import android.os.Bundle;

import android.widget.TextView;
```

```java
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

    private AirplaneModeReceiver airplaneModeReceiver;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        // Initialize the receiver
        airplaneModeReceiver = new AirplaneModeReceiver();
    }

    @Override
    protected void onStart() {
        super.onStart();
        // 1. Create an IntentFilter for Airplane Mode
        IntentFilter filter = new IntentFilter(Intent.ACTION_AIRPLANE_MODE_CHANGED);

        // 2. Register the receiver dynamically
        // This is required for Android 8.0 (Oreo) and above
```

```
        registerReceiver(airplaneModeReceiver, filter);
    }

    @Override
    protected void onStop() {
        super.onStop();
        // 3. Unregister the receiver to save battery and prevent crashes
        if (airplaneModeReceiver != null) {
            unregisterReceiver(airplaneModeReceiver);
        }
    }
}
```

res/layout/activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    android:gravity="center"
    android:padding="20dp">

    <TextView
        android:id="@+id/tvInstruction"
```

```
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Toggle Airplane Mode via your Quick Settings Panel to test."

durationInMillis) {

        final Toast toast = Toast.makeText(context, message, Toast.LENGTH_SHORT);

        // Create a timer that updates the toast every 1 second (1000ms)
```

```
        new CountDownTimer(durationInMillis, 1000) {

            public void onTick(long millisUntilFinished) {

                // Keep showing the toast to prevent it from fading out

                toast.show();

            }

            public void onFinish() {

                // Ensure the toast disappears when time is up

                toast.cancel();

            }

        }.start();

    }

}
```

Q. Explain the Android Activity life cycle in detail. Implement a simple app that logs the lifecycle methods (onCreate(), onStart(), onResume(), onPause(), onStop(), onDestroy()).

Q. Write a program that logs the different lifecycle methods of an Activity (e.g., onCreate(), onStart(), onResume(), onPause(), onStop(), onDestroy()) to the logout

MainActivity.java

package com.example.lifecyclelogger; // TODO: Check your package name

```
import android.os.Bundle;
import android.util.Log;
import android.widget.TextView;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

    // Tag for filtering logs in Android Studio
    private static final String TAG = "LifecycleEvent";

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        Log.d(TAG, "onCreate() called: Activity Initialized");
    }

    @Override
    protected void onStart() {
        super.onStart();
```

```
    Log.d(TAG, "onStart() called: Activity is becoming visible");
}

@Override
protected void onResume() {
    super.onResume();
    Log.d(TAG, "onResume() called: Activity is interactive (Top of stack)");
}

@Override
protected void onPause() {
    super.onPause();
    Log.d(TAG, "onPause() called: User is leaving (or app partially obscured)");
}

@Override
protected void onStop() {
    super.onStop();
    Log.d(TAG, "onStop() called: Activity is no longer visible");
}
```

```
    @Override
    protected void onRestart() {
        super.onRestart();
        Log.d(TAG, "onRestart() called: Activity returning from stopped state");
    }

    @Override
    protected void onDestroy() {
        super.onDestroy();
        Log.d(TAG, "onDestroy() called: Activity is being destroyed");
    }
}
```

res/layout/activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:gravity="center"
    android:orientation="vertical">
```

```
    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Check Logcat for 'LifecycleEvent'"
        android:textSize="20sp"
        android:textStyle="bold" />
</LinearLayout>
```

Q. Create an android application to demonstrate the following event listeners on the following widgets:

Button: on click listener, long click listener

Image: Touch listener with these motion events :Action up, action down and action pointer down

Edit Text : key listener on Enter key

The Appropriate message should be displayed in text view.

Activity main.xml

```
<?xml version="1.0" encoding="utf-8"?>

<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"

   android:layout_width="match_parent"

   android:layout_height="match_parent"

   android:orientation="vertical"

   android:padding="16dp"

   android:gravity="center_horizontal">

   <ImageView

       android:id="@+id/eventImage"

       android:layout_width="200dp"

       android:layout_height="200dp"

       android:layout_marginTop="100dp"

       android:background="#DDDDDD"

       android:contentDescription="Touch Area"

       android:src="@mipmap/ic_launcher" />

   <Button

       android:id="@+id/eventButton"
```

```
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Click or Long Click Me" />

    <TextView
        android:id="@+id/statusTextView"
        android:layout_width="match_parent"
        android:layout_height="76dp"
        android:layout_marginBottom="20dp"
        android:gravity="center"
        android:text="Event Status will appear here"
        android:textColor="#333333"
        android:textSize="18sp"
        android:textStyle="bold" />

    <EditText
        android:id="@+id/eventEditText"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:layout_marginTop="20dp"
        android:hint="Type and press Enter"
        android:inputType="text" />

</LinearLayout>
```

Main activity.java

```java
package com.example.eventlistenerapp;

import android.os.Bundle;

import android.view.KeyEvent;

import android.view.MotionEvent;

import android.view.View;

Activate Windows

Q. Implement a custom color scheme for your registration form. Set the background color of the entire layout to a light color, and use a contrasting color for the Submit button.

Colors.xml

```
<?xml version="1.0" encoding="utf-8"?>

<resources>

    <color name="form_background_light">#F8F9FA</color>
```

```
    <color name="submit_button_primary">#1A73E8</color>

    <color name="white">#FFFFFF</color>

</resources>
```

Activitymain.xml

```
<?xml version="1.0" encoding="utf-8"?>

<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"

    android:id="@+id/main_layout_id"

    android:layout_width="match_parent"

    android:layout_height="match_parent"

    android:orientation="vertical"

    android:padding="20dp"

    android:layout_marginTop="100dp"

    android:background="@color/form_background_light"

    android:gravity="center_horizontal">

    <TextView

        android:layout_width="wrap_content"

        android:layout_height="wrap_content"

        android:text="User Registration"

        android:textSize="24sp"

        android:layout_marginBottom="30dp"

        android:textColor="#202124" />
```

```
    <EditText

        android:id="@+id/etUsername"

        android:layout_width="match_parent"

        android:layout_height="wrap_content"

        android:hint="Username"

        android:layout_marginBottom="15dp" />

    <EditText

        android:id="@+id/etPassword"

        android:layout_width="match_parent"

        android:layout_height="wrap_content"

        android:hint="Password"

        android:inputType="textPassword"

        android:layout_marginBottom="30dp" />

    <Button

        android:id="@+id/btnSubmit"

        android:layout_width="match_parent"

        android:layout_height="55dp"

        android:text="SUBMIT"

        android:textColor="@color/white"

        android:backgroundTint="@color/submit_button_primary" />

</LinearLayout>
```

Main Activity.java

```java
package com.example.registerationformcolor;

import android.graphics.Color;

import android.os.Bundle;

import android.widget.Button;

import android.widget.EditText;

import android.widget.LinearLayout;

import android.widget.Toast;

import androidx.appcompat.app.AppCompatActivity;

import androidx.core.content.ContextCompat;

       super.onCreate(savedInstanceState);

       setContentView(R.layout.activity_main);

       // Initialize Views

       rootLayout = findViewById(R.id.main_layout_id); // Ensure this ID exists in your
XML root

       etUsername = findViewById(R.id.etUsername);
```

```
        etPassword = findViewById(R.id.etPassword);

        btnSubmit = findViewById(R.id.btnSubmit);

        // OPTIONAL: Set colors programmatically

        // (Use this if you want to override XML values dynamically)

        applyCustomColors();

        // Handle the Submit Action

        btnSubmit.setOnClickListener(v -> {

            String name = etUsername.getText().toString();

            if (name.isEmpty()) {

                Toast.makeText(this, "Please enter a name", Toast.LENGTH_SHORT).show();

            } else {

                Toast.makeText(this, "Registration Successful for " + name,
Toast.LENGTH_LONG).show();

            }

        });

    }

    /**

     * Demonstrates how to apply the light background and

     * contrasting button color using Java code.

     */

    private void applyCustomColors() {

        // Setting the light background (Off-white)

        int lightColor = ContextCompat.getColor(this, R.color.form_background_light);
```

```
        rootLayout.setBackgroundColor(lightColor);

        // Setting the contrasting button color

        int contrastColor = ContextCompat.getColor(this, R.color.submit_button_primary);

        btnSubmit.setBackgroundColor(contrastColor);

        btnSubmit.setTextColor(Color.WHITE);

    }

}
```

Q. Insert the new contents in the following resources and demonstrate their uses in the android application Android Resources: (Color, Theme, String, Drawable, Dimension, Image).

******DONE IN PRAC 1******

Q. Define the following string resources in the strings.xml file for the registration form:

Full Name, Email Password Confirm Password and Submit
Use these string resources in the corresponding TextView and Button in your layout XML.

Q. Create a registration form where the form fields (Name, Email, Password, Confirm Password) are stacked vertically. Include a Submit button at the bottom of the form.

res/values/strings.xml

```
<resources>
   <string name="app_name">RegistrationApp</string>

   <string name="label_full_name">Full Name</string>
   <string name="label_email">Email</string>
   <string name="label_password">Password</string>
   <string name="label_confirm_password">Confirm Password</string>
   <string name="btn_submit">Submit</string>
</resources>
```

Activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
   android:id="@+id/main_layout_id"
   android:layout_width="match_parent"
   android:layout_height="match_parent"
   android:orientation="vertical"
   android:padding="20dp"
   android:background="@color/form_background_light"
   android:layout_marginTop="100dp"
   >

   <EditText
       android:id="@+id/etFullName"
       android:layout_width="match_parent"
       android:layout_height="wrap_content"
       android:hint="@string/label_full_name"
       android:inputType="textPersonName" />

   <EditText
       android:id="@+id/etEmail"
       android:layout_width="match_parent"

        android:layout_marginTop="24dp"
        android:text="@string/btn_submit"
        android:backgroundTint="@color/submit_button_primary"
        android:textColor="@color/white" />

</LinearLayout>
```

MainActivity.java

```
package com.example.registerationformcolor;

import android.graphics.Color;
import android.os.Bundle;
import android.widget.Button;
import android.widget.EditText;
import android.widget.LinearLayout;
import android.widget.Toast;
import androidx.appcompat.app.AppCompatActivity;
import androidx.core.content.ContextCompat;

public class MainActivity extends AppCompatActivity {

    private EditText etUsername, etPassword;
    private Button btnSubmit;
    private LinearLayout rootLayout;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        // 1. MUST Initialize Views (Link Java to XML)
        rootLayout = findViewById(R.id.main_layout_id);
        etUsername = findViewById(R.id.etFullName); // Use the ID you set in XML
        etPassword = findViewById(R.id.etPassword);
        btnSubmit = findViewById(R.id.btnSubmit);

        // 2. Call the method to apply colors
        applyCustomColors();
```

```java
        // 3. Handle the Submit Action
        btnSubmit.setOnClickListener(v -> {
            String successMsg = getString(R.string.btn_submit) + " Successful!";
            Toast.makeText(this, successMsg, Toast.LENGTH_SHORT).show();
        });
    }

    /**
     * Applies the light background and contrasting button color.
     */
    private void applyCustomColors() {
        // Double-check: Ensure these IDs exist in colors.xml
        int lightColor = ContextCompat.getColor(this, R.color.form_background_light);
        rootLayout.setBackgroundColor(lightColor);

        int contrastColor = ContextCompat.getColor(this, R.color.submit_button_primary);
        btnSubmit.setBackgroundColor(contrastColor);
        btnSubmit.setTextColor(Color.WHITE);
    }
}
```

Q. Create an android application, with one button and image view also set the background image in the application, the image should be changed on each click of the button (Use two images).

Activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>

<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"

   android:id="@+id/main_root_layout"

   android:layout_width="match_parent"

   android:layout_height="match_parent"

   android:orientation="vertical"

   android:gravity="center"

   android:padding="20dp"

   android:background="@drawable/bg_app"> <TextView

   android:id="@+id/tvStatus"

   android:layout_width="wrap_content"

   android:layout_height="wrap_content"

   android:text="Current Image: One"

   android:textSize="22sp"

   android:textStyle="bold"

   android:textColor="#FFFFFF"

   android:layout_marginBottom="20dp"/>

   <ImageView

       android:id="@+id/ivDisplay"

       android:layout_width="250dp"

       android:layout_height="250dp"
```

```
        android:src="@drawable/image_one"

        android:scaleType="centerCrop"

        android:layout_marginBottom="30dp"

        android:background="#80000000"/> <Button

        android:id="@+id/btnChange"

        android:layout_width="wrap_content"

        android:layout_height="wrap_content"

        android:text="Change Image"

        android:padding="15dp"/>

</LinearLayout>
```

MainActivity.java

```
package com.example.imagechanger;

import android.os.Bundle;

import android.widget.Button;

import android.widget.ImageView;

import android.widget.TextView;

import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

   private TextView tvStatus;

   private ImageView ivDisplay;

   private Button btnChange;
```

```java
// Flag to track which image is currently showing
private boolean isImageOne = true;

@Override
protected void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.activity_main);

    // 1. Initialize Views
    tvStatus = findViewById(R.id.tvStatus);
    ivDisplay = findViewById(R.id.ivDisplay);
    btnChange = findViewById(R.id.btnChange);

    // 2. Set Button Click Listener using a Lambda (cleaner than anonymous class)
    btnChange.setOnClickListener(v -> {
        if (isImageOne) {
            // Switch to second image
            ivDisplay.setImageResource(R.drawable.image_two);
            tvStatus.setText("Current Image: Two");
        } else {
            // Switch back to first image
            ivDisplay.setImageResource(R.drawable.image_one);
            tvStatus.setText("Current Image: One");
        }
```

```
            // Toggle the flag

            isImageOne = !isImageOne;

        });

    }

}
```

Q. Create an android application to demonstrate the use of sub menu the toast should be appeared by selecting the sub menu item

Themes.xml

```xml
<resources xmlns:tools="http://schemas.android.com/tools">

   <!-- Base application theme. -->

   <style name="Base.Theme.Submenuapp" parent="Theme.AppCompat.Light.DarkActionBar">

       <!-- Customize your light theme here. -->

       <!-- <item name="colorPrimary">@color/my_light_primary</item> -->

   </style>

   <style name="Theme.Submenuapp" parent="Base.Theme.Submenuapp" />

</resources>
```

The Menu Resource (`res/menu/main_menu.xml`)

First, ensure you have a `menu` folder in your `res` directory. This file defines the "parent" item and the nested "sub-menu" items.

```xml
<?xml version="1.0" encoding="utf-8"?>

<menu xmlns:android="http://schemas.android.com/apk/res/android">

   <item

       android:id="@+id/menu_languages"

       android:title="Select Language">

       <menu>

           <item

               android:id="@+id/sub_english"

               android:title="English" />

           <item

               android:id="@+id/sub_hindi"
```

```
            android:title="Hindi" />
        <item
            android:id="@+id/sub_marathi"
            android:title="Marathi" />
    </menu>
  </item>

</menu>
```

Mainactivity.java

```
package com.example.submenuapp;

import android.os.Bundle;
import android.view.Menu;
import android.view.MenuInflater;
import android.view.MenuItem;
import android.widget.Toast;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

  @Override
  protected void onCreate(Bundle savedInstanceState) {
      super.onCreate(savedInstanceState);
      setContentView(R.layout.activity_main);
  }
```

```java
// THIS METHOD MAKES THE MENU APPEAR
@Override
public boolean onCreateOptionsMenu(Menu menu) {
    MenuInflater inflater = getMenuInflater();
    // This 'main_menu' refers to your res/menu/main_menu.xml file
    inflater.inflate(R.menu.main_menu, menu);
    return true;
}

// THIS METHOD HANDLES THE SUB-MENU CLICKS
@Override
public boolean onOptionsItemSelected(MenuItem item) {
    int id = item.getItemId();

    // Matching IDs from your main_menu.xml screenshot
    if (id == R.id.sub_english) {
        Toast.makeText(this, "English Selected", Toast.LENGTH_SHORT).show();
        return true;
    } else if (id == R.id.sub_hindi) {
        Toast.makeText(this, "Hindi Selected", Toast.LENGTH_SHORT).show();
        return true;
    } else if (id == R.id.sub_marathi) {
        Toast.makeText(this, "Marathi Selected", Toast.LENGTH_SHORT).show();
        return true;
    }
```

```
        return super.onOptionsItemSelected(item);

    }
```

Q. Design a form with a RadioGroup for selecting the gender (Male/Female/Other). Include a Submit button that shows the selected gender in a TextView.

Activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>

<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"

    android:layout_width="match_parent"

    android:layout_height="match_parent"

    android:orientation="vertical"

    android:layout_marginTop="100dp"

    android:padding="20dp"

    android:gravity="center_horizontal">
```

```
<TextView
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="Select Gender:"
    android:textSize="18sp"
    android:layout_marginBottom="10dp" />

<RadioGroup
    android:id="@+id/genderRadioGroup"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content">

    <RadioButton
        android:id="@+id/rbMale"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Male" />

    <RadioButton
        android:id="@+id/rbFemale"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Female" />

    <RadioButton
```

```
            android:id="@+id/rbOther"

            android:layout_width="wrap_content"

            android:layout_height="wrap_content"

            android:text="Other" />

    </RadioGroup>

    <Button

        android:id="@+id/btnSubmitGender"

        android:layout_width="wrap_content"

        android:layout_height="wrap_content"

        android:text="Submit"

        android:layout_marginTop="20dp" />

    <TextView

        android:id="@+id/tvResult"

        android:layout_width="wrap_content"

        android:layout_height="wrap_content"

        android:text="Selection will appear here"

        android:textSize="16sp"

        android:layout_marginTop="20dp"

        android:textStyle="italic" />

</LinearLayout>
```

MainActivity

```
package com.example.genderform; // Ensure this matches your package name
```

```java
import android.os.Bundle;
import android.widget.Button;
import android.widget.RadioButton;
import android.widget.RadioGroup;
import android.widget.TextView;
import android.widget.Toast;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

    private RadioGroup genderRadioGroup;
    private Button btnSubmit;
    private TextView tvResult;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        // Initialize Views
        genderRadioGroup = findViewById(R.id.genderRadioGroup);
        btnSubmit = findViewById(R.id.btnSubmitGender);
        tvResult = findViewById(R.id.tvResult);

        btnSubmit.setOnClickListener(v -> {
```

```
            // 1. Get the ID of the selected RadioButton
            int selectedId = genderRadioGroup.getCheckedRadioButtonId();

            if (selectedId == -1) {
                // No radio button was checked
                Toast.makeText(this, "Please select a gender", Toast.LENGTH_SHORT).show();
            } else {
                // 2. Find the RadioButton by the ID
                RadioButton selectedRadioButton = findViewById(selectedId);

                // 3. Get the text of that RadioButton
                String gender = selectedRadioButton.getText().toString();

                // 4. Update the TextView
                tvResult.setText("Selected Gender: " + gender);
            }
        });
    }
}
```

Q. Create a RelativeLayout for a profile screen with:

A Profile Image centered at the top of the screen.

A TextView displaying the name below the profile image, aligned to the center.

A Button below the name, aligned to the center.

Activity_main

```
<?xml version="1.0" encoding="utf-8"?>
<RelativeLayout xmlns:android="http://schemas.android.com/apk/res/android"
   android:layout_width="match_parent"
   android:layout_height="match_parent"
   android:padding="16dp">

   <ImageView
       android:id="@+id/ivProfile"
       android:layout_width="150dp"
       android:layout_height="150dp"
       android:layout_centerInParent="true"
       android:src="@drawable/image_one"
       android:contentDescription="Profile Picture" />
```

```
    <TextView
        android:id="@+id/tvProfileName"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_below="@id/ivProfile"
        android:layout_centerHorizontal="true"
        android:layout_marginTop="16dp"
        android:text="John Doe"
        android:textSize="24sp"
        android:textStyle="bold" />

    <Button
        android:id="@+id/btnEditProfile"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_below="@id/tvProfileName"
        android:layout_centerHorizontal="true"
        android:layout_marginTop="20dp"
        android:text="Edit Profile" />

</RelativeLayout>
```

MainAcivity

```
package com.example.profilescreen;

import android.os.Bundle;
import android.widget.Button;
import android.widget.ImageView;
import android.widget.TextView;
import android.widget.Toast;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        ImageView ivProfile = findViewById(R.id.ivProfile);
        TextView tvName = findViewById(R.id.tvProfileName);
        Button btnEdit = findViewById(R.id.btnEditProfile);

        btnEdit.setOnClickListener(v -> {
            Toast.makeText(this, "Opening Profile Editor...", Toast.LENGTH_SHORT).show();
        });
    }
}
```

Q. Design a ListView that displays a list of items. Each item should be a simple TextView with a string from an array of names. The list should be populated dynamically in your Activity.

Activity_main

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
   android:layout_width="match_parent"
   android:layout_height="match_parent"
   android:orientation="vertical"
   android:padding="16dp"
   android:layout_marginTop="100dp">

   <TextView
       android:layout_width="wrap_content"
       android:layout_height="wrap_content"
       android:text="Student List"
       android:textSize="20sp"
       android:textStyle="bold"
       android:layout_marginBottom="10dp"/>

   <ListView
       android:id="@+id/nameListView"
       android:layout_width="match_parent"
       android:layout_height="wrap_content" />

</LinearLayout>
```

MainActivity

```
package com.example.listviewapp; // Ensure this matches your project package

import android.os.Bundle;
import android.widget.ArrayAdapter;
import android.widget.ListView;
import android.widget.Toast;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

   // Data Source
   String[] names = {"Artem", "John", "Jane", "Alice", "Bob", "Charlie", "David"};

   @Override
   protected void onCreate(Bundle savedInstanceState) {
       super.onCreate(savedInstanceState);
       setContentView(R.layout.activity_main);

       // 1. Initialize the ListView
       ListView listView = findViewById(R.id.nameListView);
```

```
        // 2. Initialize the Adapter
        // Parameters: Context, Layout for each row, Data source
        ArrayAdapter<String> adapter = new ArrayAdapter<>(
                this,
                android.R.layout.simple_list_item_1,
                names
        );

        // 3. Set the adapter to the ListView
        listView.setAdapter(adapter);

        // 4. Handle item clicks (Optional but recommended)
        listView.setOnItemClickListener((parent, view, position, id) -> {
            String selectedName = names[position];
            Toast.makeText(this, "Clicked: " + selectedName, Toast.LENGTH_SHORT).show();
        });
    }
}
```

Q. Create an Activity that hosts a Fragment. When a button in the Activity is clicked, pass a string value to the Fragment and display it in a TextView.

DisplayFragment.java

```java
package com.example.fragmentapp;

import android.os.Bundle;
import android.view.LayoutInflater;
import android.view.View;
import android.view.ViewGroup;
import android.widget.TextView;
import androidx.annotation.NonNull;
import androidx.annotation.Nullable;
import androidx.fragment.app.Fragment;

public class DisplayFragment extends Fragment {

   @Nullable
   @Override
   public View onCreateView(@NonNull LayoutInflater inflater, @Nullable ViewGroup container,
@Nullable Bundle savedInstanceState) {
       View view = inflater.inflate(R.layout.fragment_display, container, false);
       TextView tvDisplay = view.findViewById(R.id.tvFragmentDisplay);

       // Retrieve the data passed from the activity
       if (getArguments() != null) {
           String receivedData = getArguments().getString("msg_key");
           tvDisplay.setText(receivedData);
       }

       return view;
   }
}
```

MainActivity.java

```java
package com.example.fragmentapp;

import android.os.Bundle;
import android.widget.Button;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

   @Override
   protected void onCreate(Bundle savedInstanceState) {
       super.onCreate(savedInstanceState);
       setContentView(R.layout.activity_main);

       Button btnSend = findViewById(R.id.btnSendToFragment);

       btnSend.setOnClickListener(v -> {
           // 1. Create the Fragment instance
```

```
            DisplayFragment fragment = new DisplayFragment();

            // 2. Prepare the data in a Bundle
            Bundle bundle = new Bundle();
            bundle.putString("msg_key", "Hello from Activity!");
            fragment.setArguments(bundle);

            // 3. Perform the Fragment Transaction
            getSupportFragmentManager().beginTransaction()
                    .replace(R.id.fragment_container, fragment)
                    .commit();
        });
    }
}
```

Fragment_display.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:gravity="center"
    android:orientation="vertical"
    android:background="#E3F2FD">

    <TextView
        android:id="@+id/tvFragmentDisplay"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Waiting for data..."

        // 2. Initialize ListView
        ListView listView = findViewById(R.id.animalListView);

        // 3. Create the Adapter
        // Uses simple_list_item_1, a built-in layout for a single TextView row
        ArrayAdapter<String> adapter = new ArrayAdapter<>(
                this,
                android.R.layout.simple_list_item_1,
                animals
        );

        // 4. Set the Adapter to the ListView
        listView.setAdapter(adapter);

        // 5. Set Item Click Listener to display Toast
        listView.setOnItemClickListener((parent, view, position, id) -> {
            String selectedAnimal = animals[position];
            Toast.makeText(MainActivity.this, "Selected: " + selectedAnimal, Toast.LENGTH_SHORT).show();
        });
    }
}
```

- **Create an app that displays an ImageView. When the user clicks the ImageView, show a Toast with the message & Image clicke**d!

Activity main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
  android:layout_width="match_parent"
  android:layout_height="match_parent"
  android:gravity="center"
  android:orientation="vertical">

  <ImageView
    android:id="@+id/myImageView"
    android:layout_width="200dp"
    android:layout_height="200dp"
    android:src="@mipmap/ic_launcher"
    android:contentDescription="Clickable Image"
    android:clickable="true"
    android:focusable="true" />
```

```
</LinearLayout>
```

MainActivity.jaava

```
package com.example.imageclickapp; // Double-check this matches your package name

import android.os.Bundle;
import android.widget.ImageView;
import android.widget.Toast;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

  @Override
  protected void onCreate(Bundle savedInstanceState) {
      super.onCreate(savedInstanceState);
      setContentView(R.layout.activity_main);

      // 1. Initialize the ImageView
      ImageView imageView = findViewById(R.id.myImageView);

      // 2. Set the Click Listener
      imageView.setOnClickListener(v -> {
          // 3. Display the Toast message
          Toast.makeText(MainActivity.this, "Image clicked!", Toast.LENGTH_SHORT).show();
      });
  }
}
```

- Design a simple login form using ConstraintLayout that has:

  Username and Password fields aligned vertically.

  Login button centered horizontally below the fields.

  Forgot Password? link aligned to the right of the password field.

  Task: Position all the elements using constraints in the ConstraintLayout.

Activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout xmlns:android="http://schemas.android.com/apk/res/android"
   xmlns:app="http://schemas.android.com/apk/res-auto"
   android:layout_width="match_parent"
   android:layout_height="match_parent"
   android:padding="24dp">
```

```
<EditText
    android:id="@+id/etUsername"
    android:layout_width="0dp"
    android:layout_height="wrap_content"

    if (Build.VERSION.SDK_INT >= Build.VERSION_CODES.O) {
        NotificationChannel channel = new NotificationChannel(
                CHANNEL_ID, "Download Service", NotificationManager.IMPORTANCE_LOW);
        getSystemService(NotificationManager.class).createNotificationChannel(channel);
    }
}
```

```
    @Override
    public IBinder onBind(Intent intent) { return null; }
}
```

IMP:In order to display the notification it will ask permission to 'allow' 'dont allow' to send notification
To display this pop up embed the code bellow in you notification related applications.

Check for Runtime Notification Permission

On Android 13 (API 33) and above, a foreground service cannot show a notification unless you explicitly ask the user for permission. If the permission is denied or not asked, the service might fail to start.

```
import android.content.pm.PackageManager;
import android.os.Build;

if (Build.VERSION.SDK_INT >= Build.VERSION_CODES.TIRAMISU) {
```

```
  if (checkSelfPermission(android.Manifest.permission.POST_NOTIFICATIONS) !=
PackageManager.PERMISSION_GRANTED) {
      requestPermissions(new String[]{android.Manifest.permission.POST_NOTIFICATIONS}, 101);
  }
}
```

- **Create a BroadcastReceiver that listens for the Android Intent ACTION_BATTERY_CHANGED broadcast and shows a Toast displaying the current battery percentage.**

Activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
  android:layout_width="match_parent"
  android:layout_height="match_parent"
  android:gravity="center"
  android:orientation="vertical">

  <TextView
      android:layout_width="wrap_content"
      android:layout_height="wrap_content"
      android:text="Listening for Battery Changes..."
      android:textSize="18sp"
      android:textStyle="italic" />
</LinearLayout>
```

MainACtivity

```
package com.example.batteryapp;
import android.content.BroadcastReceiver;
import android.content.Context;
import android.content.Intent;
import android.content.IntentFilter;
import android.os.BatteryManager;
import android.os.Bundle;
import android.widget.Toast;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

  // 1. Define the BroadcastReceiver
  private final BroadcastReceiver batteryReceiver = new BroadcastReceiver() {
      @Override
```

```
        public void onReceive(Context context, Intent intent) {
            // Get the current battery level and scale
            int level = intent.getIntExtra(BatteryManager.EXTRA_LEVEL, -1);
            int scale = intent.getIntExtra(BatteryManager.EXTRA_SCALE, -1);

            // Calculate percentage
            float batteryPct = (level / (float) scale) * 100;

            // Show the Toast
            Toast.makeText(context, "Battery Level: " + (int) batteryPct + "%", Toast.LENGTH_SHORT).show();
        }
    };

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
    }

    @Override
    protected void onStart() {
        super.onStart();
        // 2. Register the receiver dynamically for battery changes
        IntentFilter filter = new IntentFilter(Intent.ACTION_BATTERY_CHANGED);
        registerReceiver(batteryReceiver, filter);
    }

    @Override
    protected void onStop() {
        super.onStop();
        // 3. Unregister to prevent memory leaks when the app is not visible
        unregisterReceiver(batteryReceiver);
    }
}
```

IMP: **The Emulator Method (PC)**

If you are using the Android Studio Emulator:

1. Click the **three dots (...)** at the bottom of the emulator sidebar (Extended Controls).
2. Go to the **Battery** tab.
3. Manually move the **Charge level** slider or change the **Battery status** (e.g., from Charging to Discharging).
4. Each time you move that slider, your app's `Toast` should trigger immediately.
